

'tpf-tools-basic'

'tpf-tools-basic' is a tool for low-latency, bidirectional transmission of audio among different locations. Version 1.1.1 is compatible with macOS 10.14+ (only Intel). For further information about 'tpf-tools-basic', including manuals, see:<https://networkperformance.space>.

Download:

- Go to: <>
- Download the ' ' file.

Installation:

- Open the 'tpf-party-v1.1.1.dmg' file.
- Drag the 'tpf-party.app' to your 'application folder' and drop it there.
- Open the 'tpf-party.app' with the right mouse button, or with 'Ctrl & Click'.

Note: The 'tpf-party.app' is included in the 'tpf-tools-intermediate'.

Start the 'tpf-tools-basic':

- After installation, start your audio session: double-click the file 'tpf-party.app' from the folder 'tpf-tools-basic'.
- Click on 'Settings' and choose your connection parameters by entering server name, room name and your name in the respective boxes.
- Close the 'Settings' window. Click on the upper left box beside your name; it turns blue and the remote peers, connected to the same server and room, will appear.
- To connect, click on the box besides the peer name; it turns blue and it starts to blink in yellow at your remote partner's end. By clicking on it, a connection is established.
